## SUMMARY

A software engineer with keen observation at identifying key product requirements and architecting scalable, user-facing systems. I have a proven track record of leading teams to translate complex product needs into extensible, well-architected modules that enhance business operations and drive success.

## EXPERIENCE

### **Apple Inc.** (May 2024 to Present) *Senior Software Engineer, Full Stack*

- Spearheaded the design and re-architecture of a unified EMEA sales platform using micro-frontends (Module Federation, Webpack) so that it can seamlessly integrate new in-house LLM-based insights with React.js v18+ and latest versions. The platform has increased productivity 1,000+ stores across Europe and the Middle East, reduced cost 60k USD.
- Managed an engineering team, bridging business needs with technical execution using JavaScript, TypeScript, React.js, Next.js, and Nest.js. Enhanced scalability with GraphQL (Apollo), Redux, D3.js, React Router, and TanStack, ensuring future-ready performance.

### **Wiser inc.** (January 2024 to May 2024) *Senior Software Engineer*

- Led the design and implementation of a ReBAC (Relation-Based Access Control) system, leveraging TypeScript and Nest.js, react.js significantly enhancing SSO login infrastructure.
- Utilized Auth0's OpenFGA, inspired by Google's Zanzibar to design a scalable relational schema, optimizing security and performance, and built a resilient, scalable microservice deploying on AWS cloud.

### **Postman Inc.** (May 2021 to July 2023) *Senior Software Engineer*

- Built a custom Reporting system from scratch, eliminating third-party dependencies and saving USD 150k annually. Optimized data ingestion pipelines with automated alerting to ensure real-time reliability and accuracy.
- Led end-to-end architecture (React.js, Electron.js, MobX) and established robust testing practices (unit & E2E), improving system stability and reducing production incidents.

### **Airmeet Inc.** (July 2019 to May 2021)

- Led development for a video-conferencing app with technologies including Node.js, Express.js, PostgreSQL, React.js, Redux, Firebase, and Agora's SDK, delivering features like live Q&A and support for live-caption subtitles.
- Managed to discuss between product requirements and engineering teams, creating resilient systems and in-house support tools for real-time error analysis and network issue resolution.

### **Swoo - Algorythma** (October 2018 - June 2019)

- Designed and developed the web app for swoo.tv using Node.js, Express.js, Next.js, and React.js, integrating with microservices in Python, GoLang, and Java, which resulted in a \$100,000 reduction in dashboard service costs.
- Built premium user-facing features with animations using React-Spring and led the development of internal support tools, integrating Next.js with Firebase for live notifications.

### **Klovechef Nutripot App** (March 2017 - September 2018)

- Connected remotely with team from Canadian startup to build React Native app for NutriPot a recipe listing application on both the platform Android and iOS
- Implemented Video player, ChatBot integration with React-native concepts like StackNavigator, Tab Navigator, BottomTabNavigator swipeable, Drawer Navigator. Lead the feature development and delivery.
- Using Ant-design to render components like navigation bar a carousel with React and ant-design components.

## Pioneered Work

### Patientconnect.io - Chicago, USA (Remote)

- Worked directly with the founders and visiting doctors to design and build the hospital medical data system. This can help doctors, patients, insurers to manage their data on the platform
- I have led the development of delivering features while managing teams to build GraphQL based API with Ruby on rails and front-end with React, Vue.js and Typescript.
- Features like Video communication, google analytics for business and SEO requirements, design database to support multiple entities for different user roles.

### FohBoh Inc. Nashville, USA (Remote)

- Closely working with restaurant managers to translate their job posting requirements into a full-stack product. This was a hospitality management job portal.
- Built the app with Python, Django, Graphene for GraphQL API endpoints. Served with Apollo client on front-end with React, Vue.js and Typescript.
- I led the project to maintain the component repo as a separate library to support the main app in a mono-repo architecture.
